This secondary use is a non-consumptive use which will be incidental to the use of water released under Secondary Permit No. 73793-01 or Secondary Permit No. 73793-02. The quantity released under one of those Secondary Permits and other water in the River will be used to allow incidental hydroelectric generation at one or more of the four hydro generation plants, Farad, Fleish Verdi or Washoe. Water will be diverted at one or more of the four hydroelectric generation plants' Points of Diversion listed in Exhibit "A" and allowed to flow to each plant through the penstock to the generating facility and returned back to the river at each plant location. The horsepower generated depends on the flow diverted. Listed below is the minimum and maximum horsepower each plant can generate at a maximum and minimum rate of flow diverted.

Plant	Maximum	Minimum
Farad	400 cfs (3,862 hp)	100 cfs (701hp)
Fleish	327 cfs (3,640 hp)	100 cfs (798 hp)
Verdi	399 cfs (3321 hp)	100 cfs (774 hp)
Washoe	396 cfs (2,823 hp)	100 cfs (731 hp)

It is one of several applications for secondary permits under the permit to be issued under Amended Primary Application No. 73793. The quantity of water which may be released and used from storage under this and related secondary permits in any one year will not exceed the amounts allowed by the Truckee River Operation Agreement. The water released under either of these secondary permits may be diverted and used for incidental hydroelectric power generation under this Secondary Permit and in accordance with the Truckee River Operation Agreeemnt. Water used would be returned to the Truckee River for use under the secondary permit under which this water was releaed.

Any secondary permit issued under this application shall enter into effect simultaneously with the entry into effect of the Truckee River Operating Agreement.
